PROFESSIONAL SUMMARY

Software professional with a Bachelor's degree in Computer Science and over decade of experience in clinical data environments. Proficient in the full software development life cycle, including design, testing, and deployment. I enjoy building full-stack applications and writing scripts to automate complex tasks.

TECHNICAL SKILLS

Programming Language: Java, Python, C++, SQL, HTML, CSS

Technologies: Node.js, Express.js, MySQL, REST APIs, Git/GitHub, CI/CD Concepts

Databases: MySQL, Cerner Helix

Systems: Linux, Windows, Cloud fundamentals

PROJECTS

- **Full-Stack Web Application:** Built a web app using Node.js, Express, and MySQL. Designed the database schema and implemented secure parameterized queries.
 - **Python Automation:** Developed Python scripts for file I/O and data management, utilizing OOP principles and unit testing to ensure functionality.
 - **AML Survival Analysis (Machine Learning):** Developed a predictive model for AML patient outcomes using Python, Pandas, and Scikit-Learn. Implemented Kaplan-Meier and Cox analysis to visualize survival curves and identify key risk factors.
-

PROFESSIONAL EXPERIENCE

Senior Cytogenetic Scientist | MD Anderson Cancer Center (2009–Present)

- Collaborated with development teams to troubleshoot application errors and identify software defects.
 - Translated clinical workflows into technical requirements for software updates.
 - Performed rigorous system testing and validation for database migrations and software patches.
 - Created scripts to assist with data verification and reporting, reducing manual workload.
-

EDUCATION

M.S. Cybersecurity & Information Assurance, Western Governors University (2025)

B.S. Computer Science, Oregon State University (2018)
